Re-opening borders safely

Issue

Governments need to be **confident** that they are mitigating the risk of importing COVID-19 to **re-open borders without quarantine** and restart aviation.

Solution

Testing has been proven to be the safest and most effective **method** to achieve this. And passengers are willing to get tested to travel.

Confidence

But both **passengers** and **governments** need to have confidence in **each passenger's verified COVID-19 status**.

The challenges

Passengers

Need **accurate information** on test/vaccination requirements, where they can get tested /vaccinated, and the means to securely **convey test/vaccine information** to airlines and border authorities

Airlines

Need to have the ability to **provide accurate information** to their **passengers** on test/vaccination requirements and **verify** that a passenger meets the requirements for travel

Governments

Need to be able to **verify** the authenticity of test/vaccination and the **identity** of those presenting that certificates digitally

Laboratories

Need to be able to **issue certificates** that will **recognized** by governments

Solution

To address these challenges
IATA is launching:

...a combination of **four
modules** that are interoperable
and open access

IATA Travel Pass

Developed for everyone

Registry of Health Requirements

powered by Timatic

- Enables **passengers** to find accurate **information** on **travel, testing** (and eventually vaccine) **requirements** for their journey

Registry of testing / vaccine centers

- Enables **passengers** to **find centres and labs** at their departure location which meet the standards for testing/vaccination **requirements** of their **destination**

Lab App

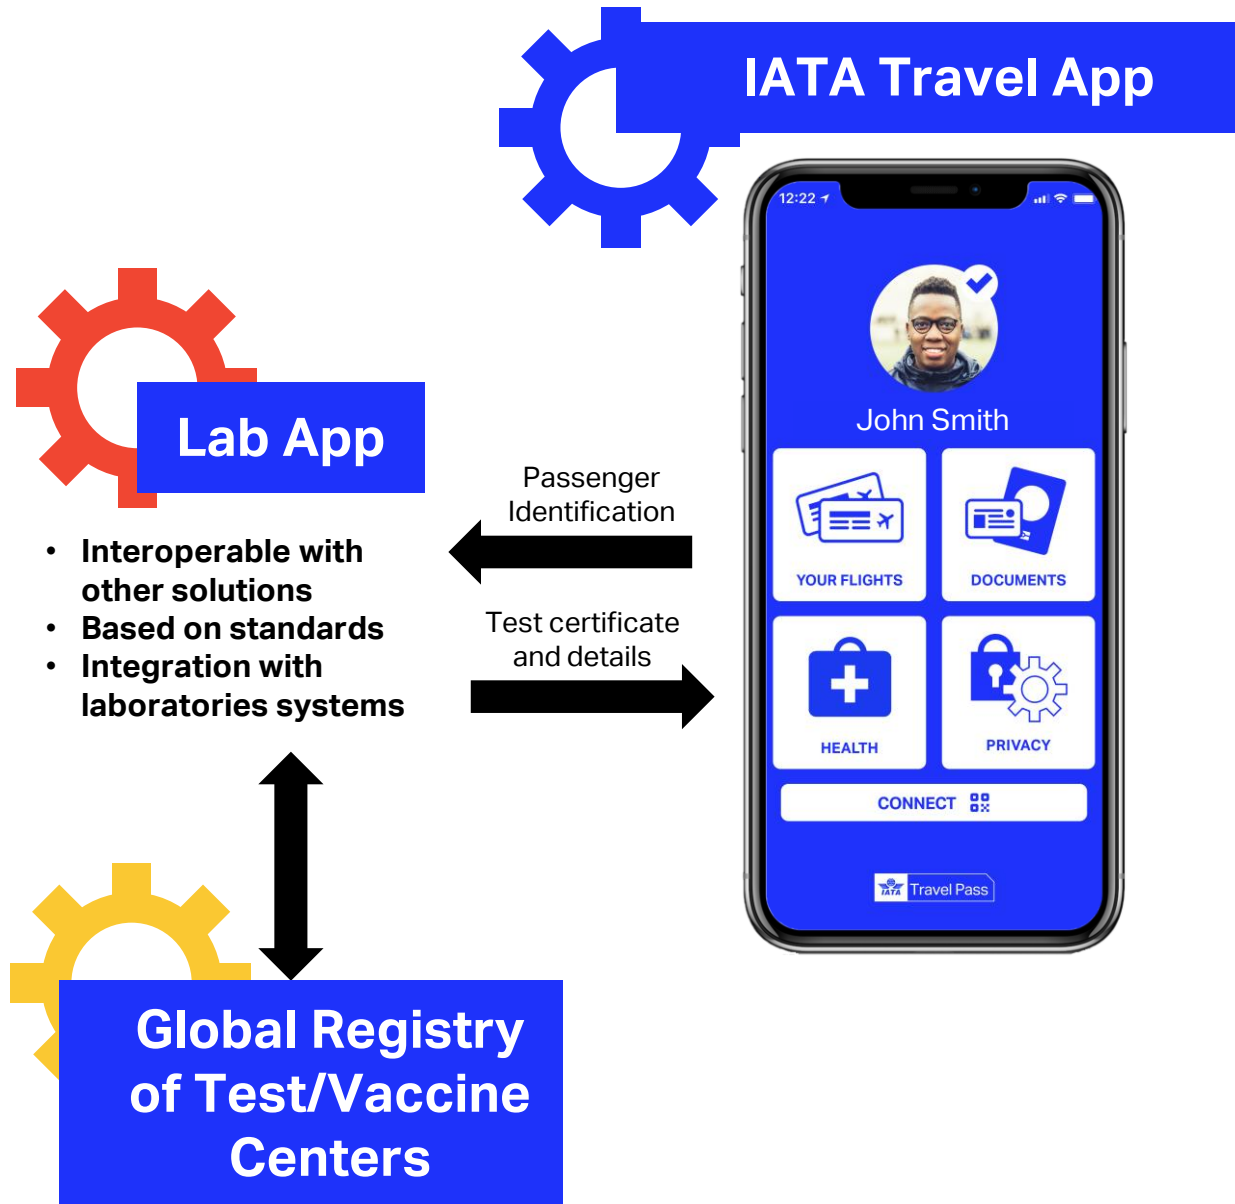

- Enables **authorized labs and test centers** to securely **send test results or vaccination certificates** to passengers

Contactless Travel App

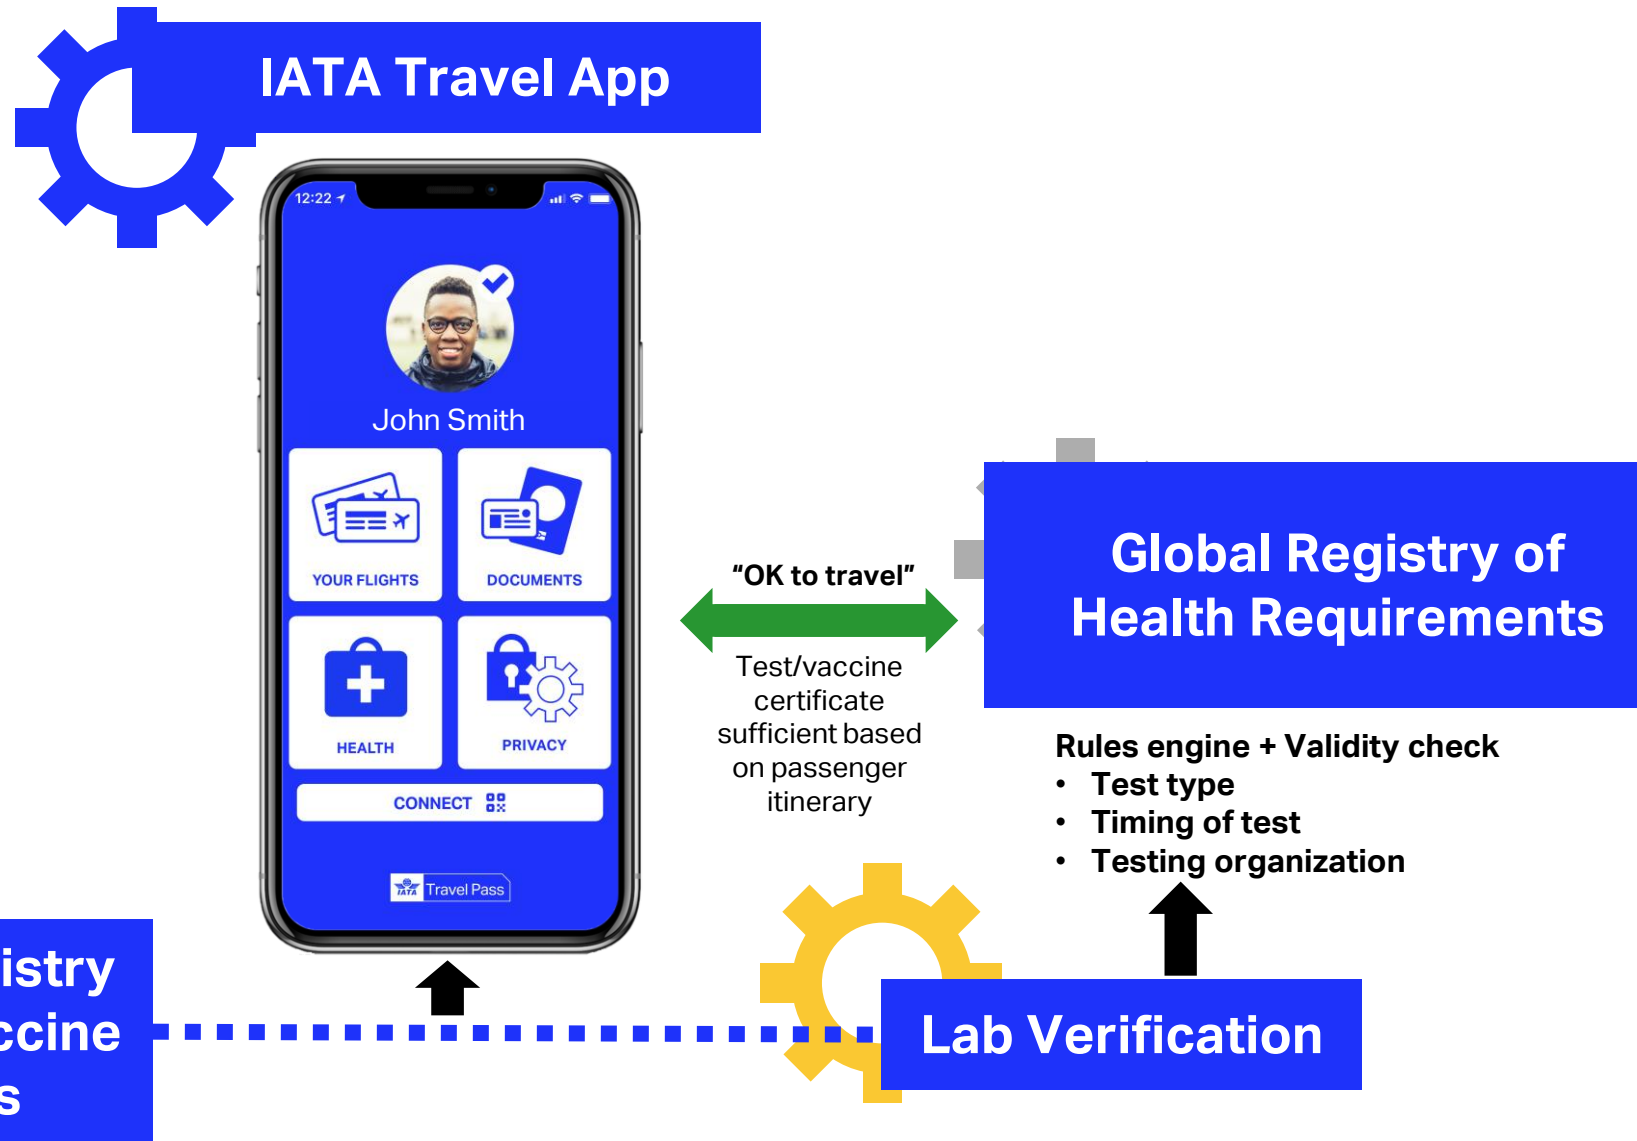

- Enables passengers to (1) **create a 'digital passport'**, (2) **verify** their **test/vaccination** meets the **regulations** & (3) **shares** test or vaccination certificates with **authorities** to facilitate travel.
- Can be used by travelers to manage **travel documentation digitally** and seamlessly throughout the travel experience.

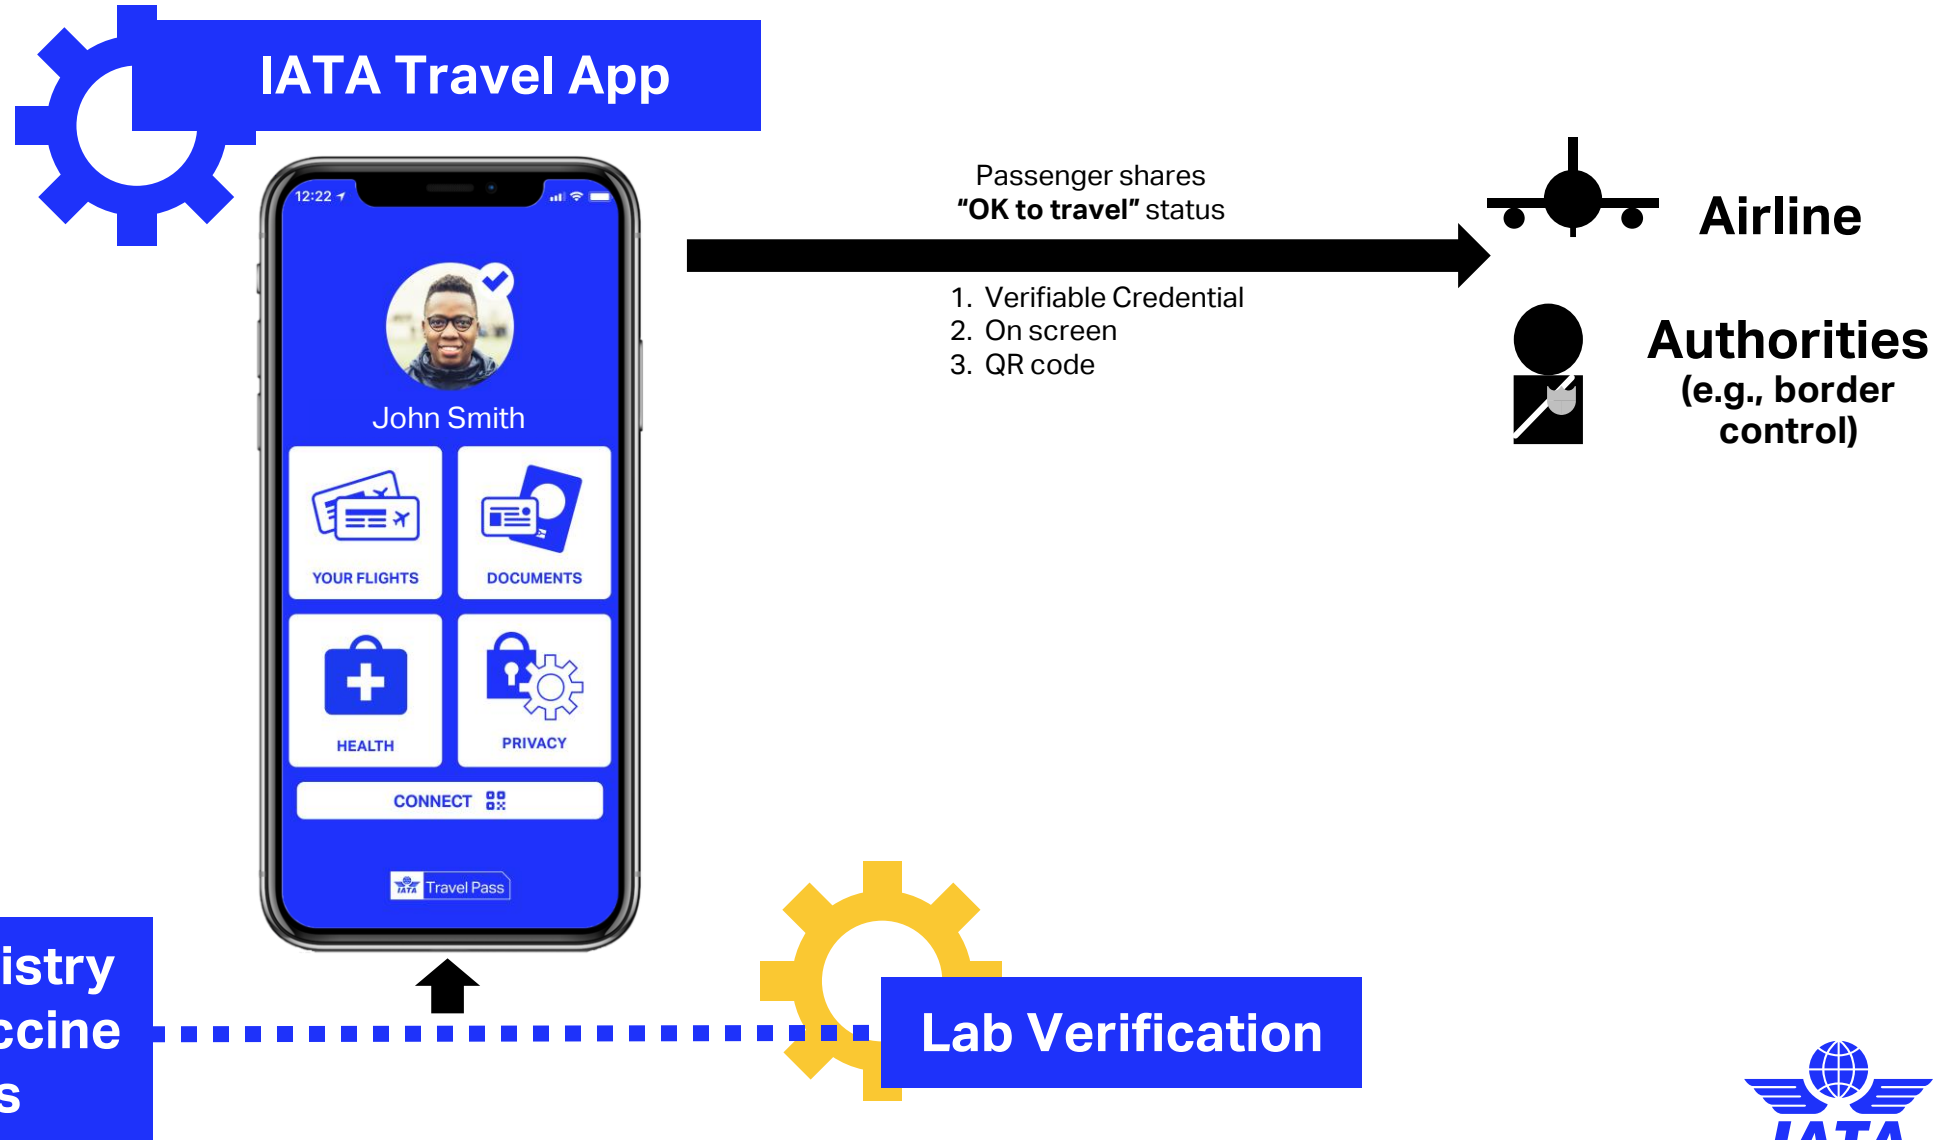

Step 1 – getting proof of test/vaccination

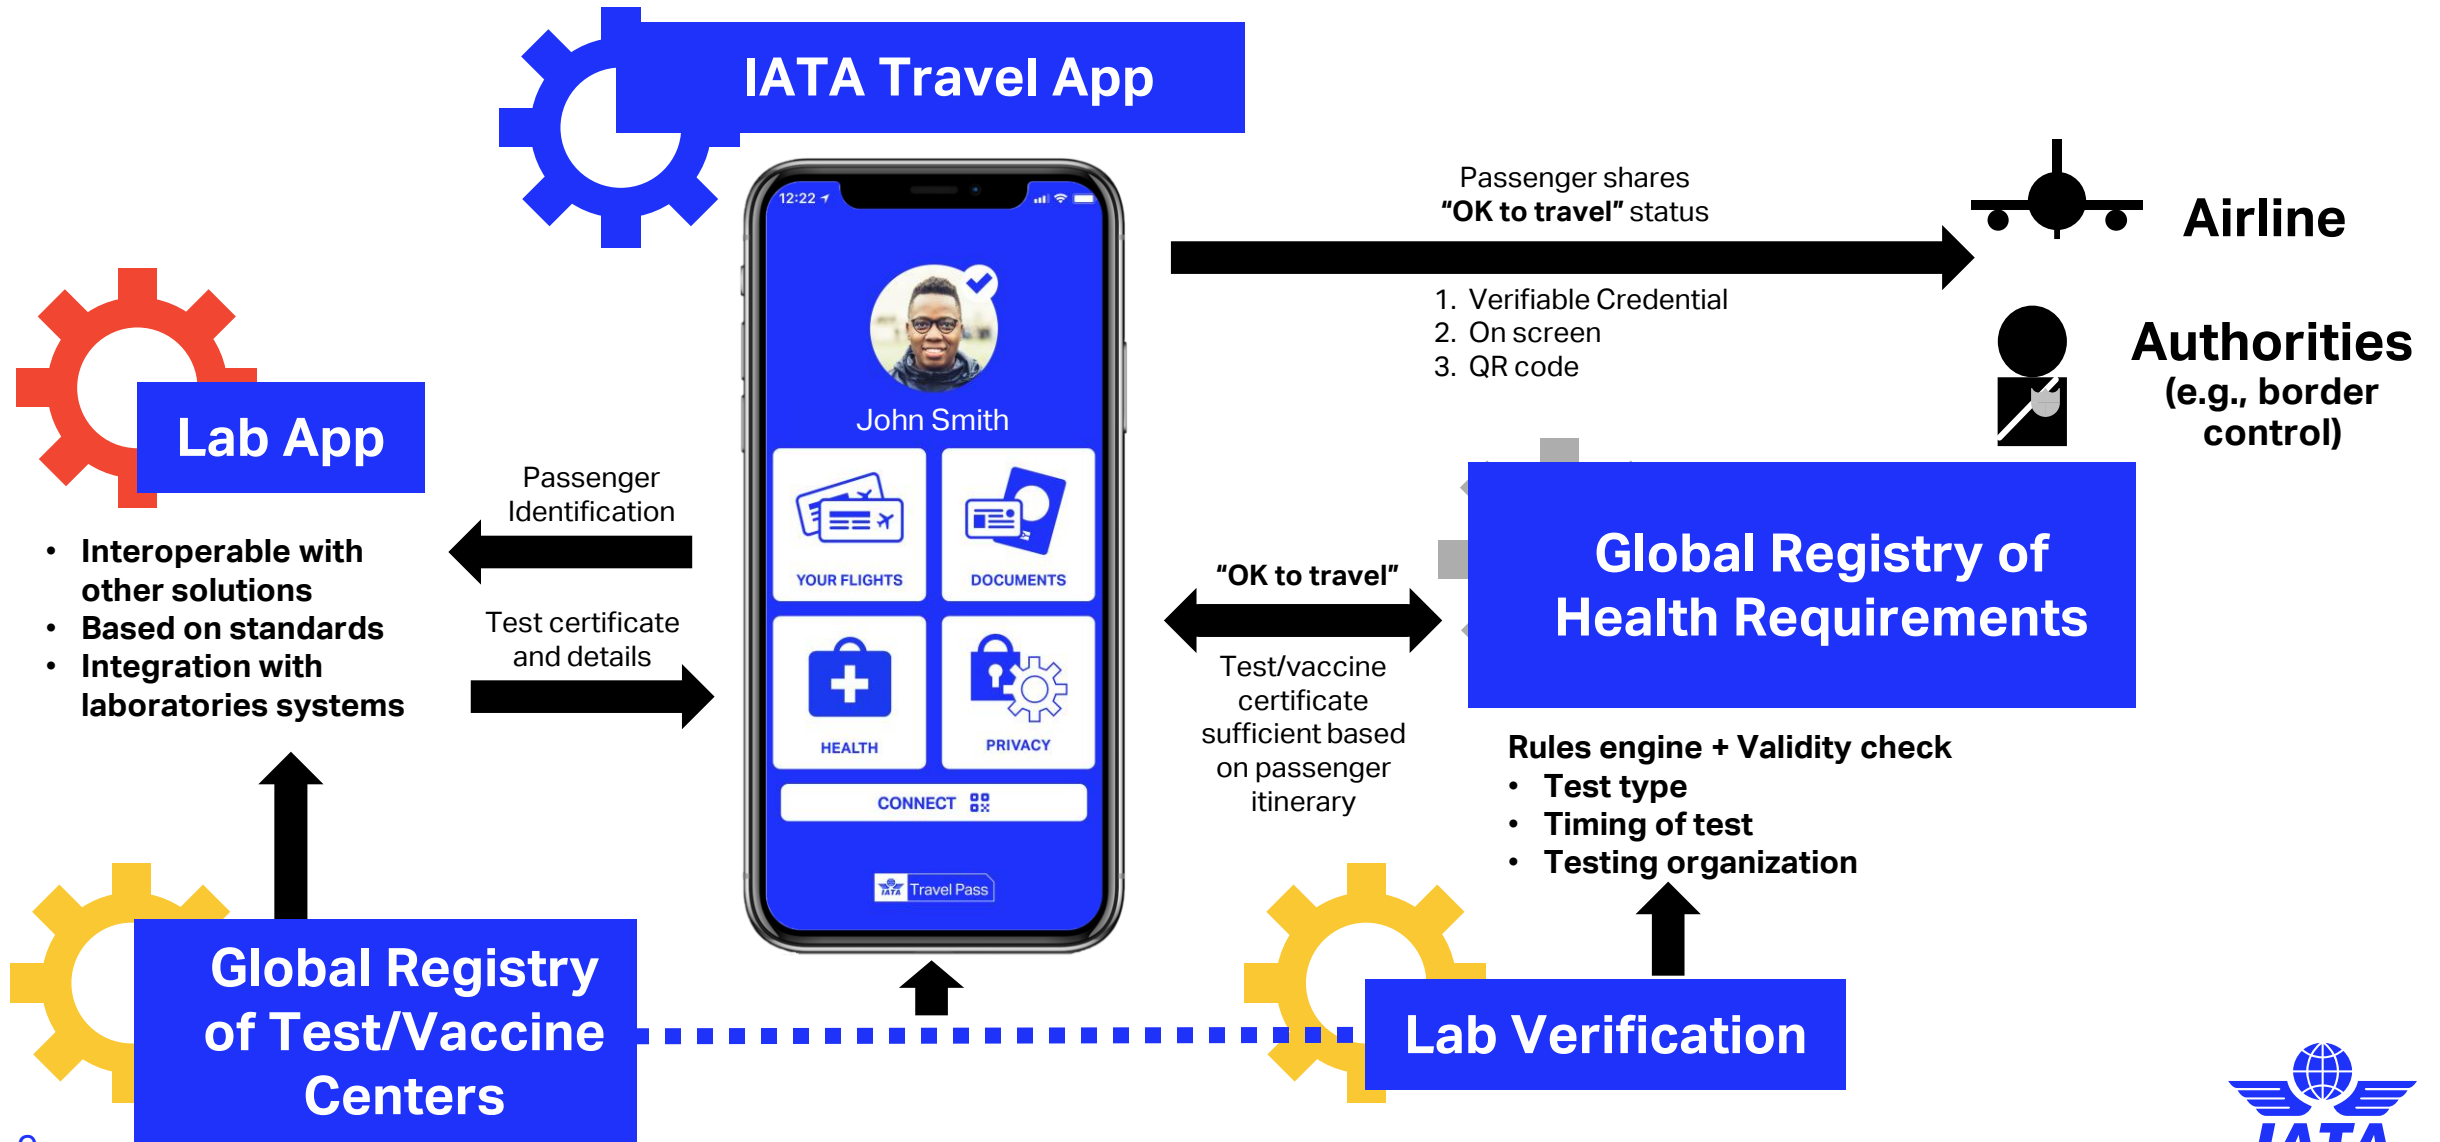

Step 2 – verifying test/vaccination is valid for the itinerary

Step 3 – sharing proof of test/vaccination with airline/government

Overview

High level data privacy and security

'Decentralized Technology' means there is **no** central database holding passenger information

Rights

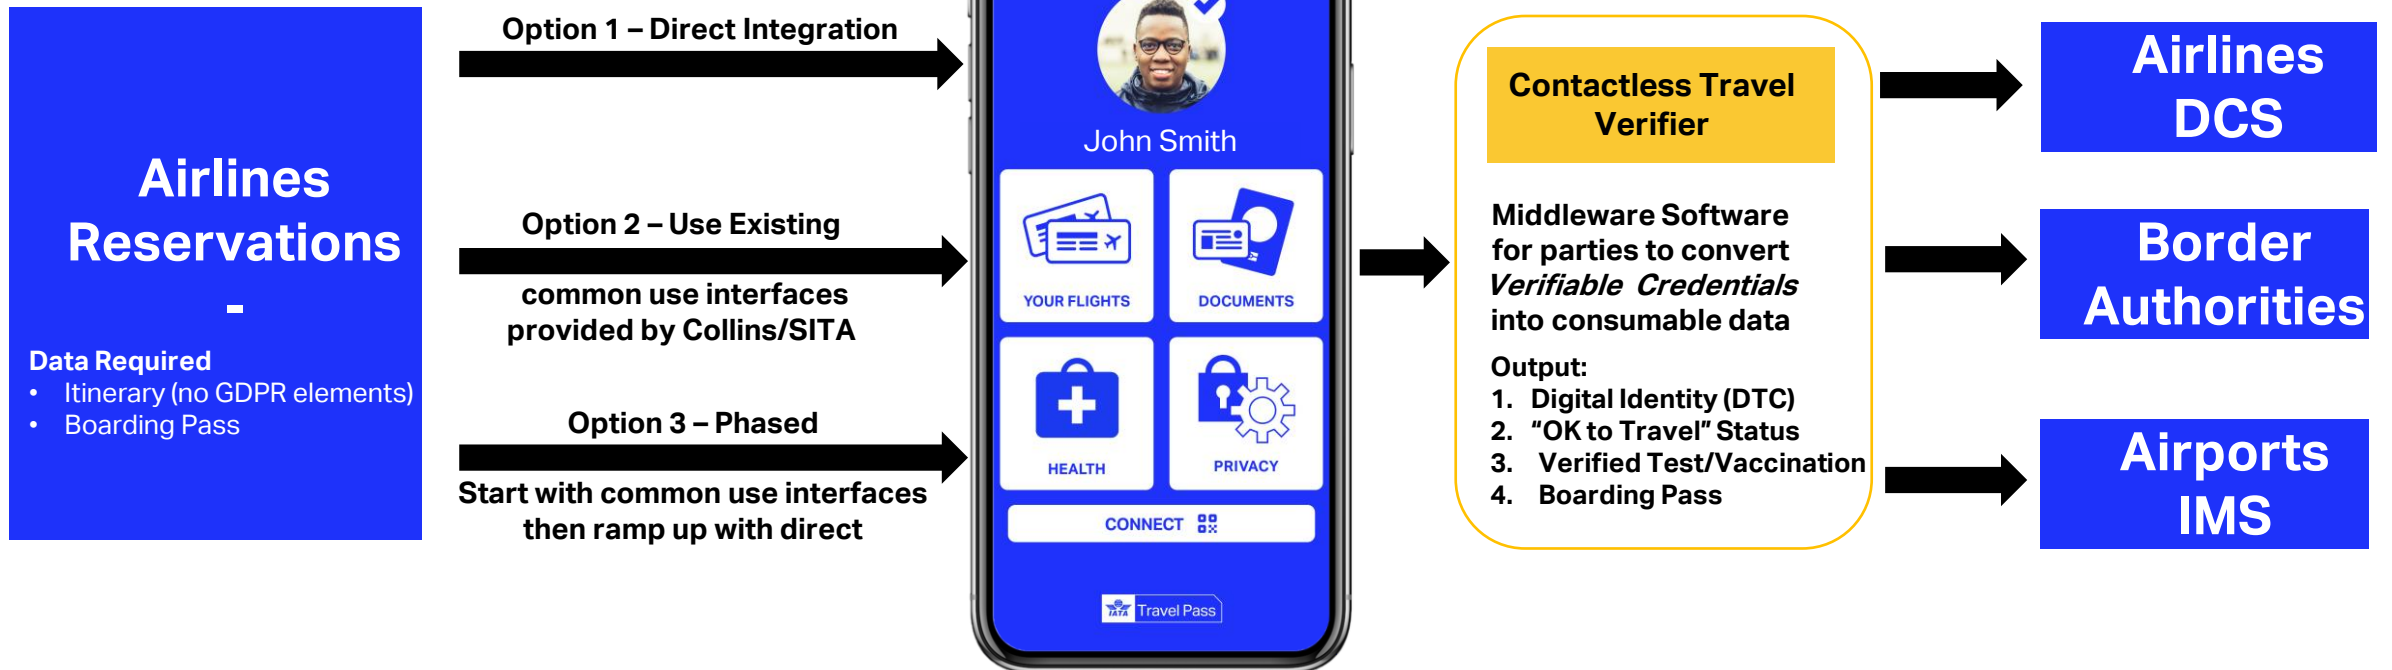

Passengers have the sole right share to their data

Users can delete their data anytime on their app

Compliance

Country regulations on access to passengers' data will be respected (e.g. France & Germany)

Airlines, Airports & Governments – Technical Integration

Advisory Group

IATA Travel Pass - Guidance and Prioritization

Benefits of IATA Travel Pass?

- **Designed for airlines and passengers**
- **Identity Management:** Confidence in ecosystem – opening borders
- **Rules database:** Timatic COVID
- **Decentralized system:** No central database. No external party owns passenger data
- **Interoperable:** open standards and open networks
- **Scalable & Sustainable:** additional data-sets required for travel can be easily integrated into app

IATA Travel Pass Trust Proposition

Identity verified at every step

- Digital identity creation
- Travel details collection
- Test result collection
- Travel requirements verification

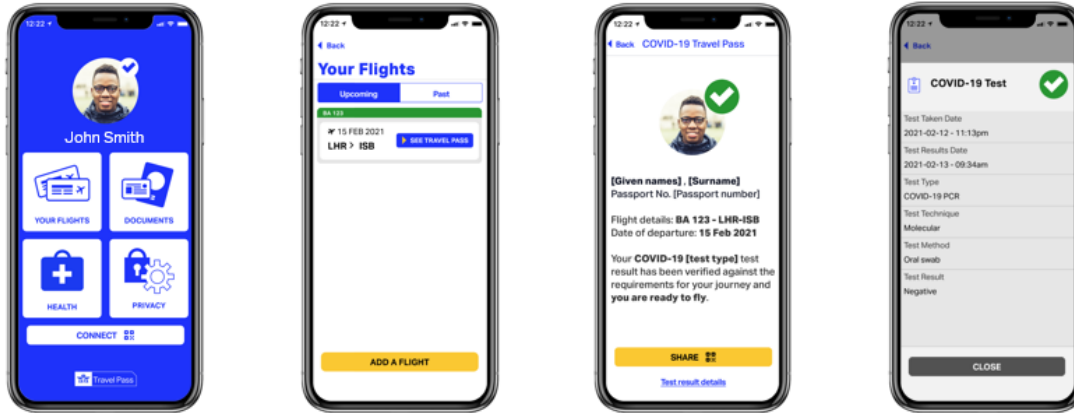

Timeline

The way forward for Governments

- Continue to assist IATA by **providing timely updates relating to the Government entry and testing requirements**, for IATA Global Health Registry (Timatic) be fully up to date
- **Accepting digital** certificates for **incoming travelers**

- **Issuing** of **digital vaccination** certificates for nationals
- **Obtaining** test/vaccination **info from travelers** via IATA Travel Pass "linked" to Government processes and/or platforms
- **Support** industry efforts for **standard** certificates (WHO, ICAO, EU, etc.)
